Course Information

Imagine crafting the perfect instructions for a powerful AI tool. Prompts act like magical spells, guiding AI tools to deliver the results you desire, from weather forecasts to Shakespearean sonnets and even code generation for building applications. In this course, you'll learn how the right instructions will guide AI to the right answers and how you can shape the behaviour of AI systems, aligning them to your goals.

Moreover, you will acquire a deeper understanding of language models, the backbone of AI's ability to comprehend and generate human-like text. From transformers to recurrent neural networks, you'll uncover the inner workings of these models and learn how to leverage them effectively through prompt engineering techniques. However, it's not just about understanding the technicalities – you'll also explore the ethical considerations of prompt engineering to recognise and mitigate biases in your prompts, ensuring fair and inclusive outcomes in AI interactions.

Finally, armed with the basic knowledge and skills, you'll step into the realm of advanced prompt engineering strategies. Explore the use of prompts in various fields like finance, health care, education, and more. You'll learn how to leverage the power of existing AI tools and even train and test your language models to build useful applications. In this course, you're not just learning about AI – you're becoming a master prompt engineer equipped to shape the future of human-AI interactions responsibly and ethically. Enrol today and start learning.

Modules Studied

Module 1: Introduction to Prompt Engineering for AI Applications

Module 2: Course assessment
